ACT

An access control solution for all scenarios

ACT – IP access control

Access control is primarily letting the "authorized" people conveniently in at the right times, as well as keeping the "unauthorized" people out. Because we think access control works best when it's both simple and secure, we combined over 30 years' engineering experience with modern internet technology to create ACT.

ACT grows with your business

ACT has all the features you would expect in a modern day access control system. ACTpro provides optimal security for a system of up to 32 doors directly from the panel. After that ACT Enterprise takes over and can grow up to 4000 doors so your initial investment is never wasted. The software provides flexibility to update and maintain your system efficiently, resulting in both time and cost savings.

ACT user application examples

Retail environments

In residential complexes, ACT solves the problems associated with lost keys or widely-circulated entry-door codes, while at the same time providing easy access to staff. It is also possible to limit access to certain times of the day or even days of the week.

Office environments

In office environments, ACT is ideal for the control of the main entry door, as well as back-doors, office doors, supply room doors, and server rooms etc., as the system makes it very easy to provide time-limited access to temporary staff and visitors.

Commercial environments

In commercial environments, ACT significantly enhances security by automatically locking the main door during break times, after business hours, and on weekends and public holidays. It also makes life easier for businesses that employ temporary or casual employees, as it allows for the flexibility of time-limited access cards.

Where ACT wins

ACT solves the problems of lost keys or widely circulated entry door codes. It controls main entry doors day-to-day and gives time-limited access. Main doors can be set to lock during break times and outside business hours automatically. Vanderbilt's years of experience have ensured that ACT delivers simplicity of use to infrequent users to give just the right balance of power and workability.
