SiPass integrated

Flexible & Scalable Security Management

vanderbiltindustries.com

Why is there a need for Access Control?

- ✓ Increasing intensity and occurrence of threats and security breaches
- ✓ Protection of company assets, people and infrastructure
- ✓ Know who is in your building and where during an emergency

SiPass integrated offers customized access control solutions that meet all these diverse requirements – whether through their uniquely reliable and secure system architecture, highly customizable solutions for a wide variety of application areas, flexible remote access via smartphone, tablet or PC, or networking that's based on standard interfaces and protocols.

SiPass integrated applications include:

✔ Hospitals

Accessibility is of critical importance in hospital environments. The large traffic flow typically associated with a hospital and the combination of low-security and high-security areas make a flexible and user-friendly system like SiPass integrated the obvious access control choice.

✔ Universities and other campuses

SiPass integrated is ideal for campuses as it can easily manage access to multiple buildings with differing security requirements, as well as storing and processing large amounts of cardholder data. During particularly busy times like enrolment periods, it has no difficulty assigning access rights, issuing card numbers, and printing large numbers of cards while simultaneously communicating with the university's student database systems.

✓ Airports

Since SiPass integrated is built to manage very large amounts of access control traffic, it is the perfect choice for airports. It provides a complete access control and security solution with integration to video surveillance systems and other airport infrastructure. The simple-to-use interface ensures that airport security staff can easily and effectively monitor their security systems at all times.

✓ Manufacturing operations

Safety is of paramount importance within a manufacturing or industrial facility. SiPass integrated helps address occupational health and safety issues by controlling access, providing anti-passback features, and carrying out head counts so that it is fast and easy to produce a mustering report and track cardholders during emergency cases.
