# Integrating with ANPR
## Vanderbilt's award-winning ACTpro access control

Vanderbilt's award-winning ACTpro access control system now integrates with Number Plate Recognition cameras (NPR/LPR)) that output a license plate number on th OSDP or Wiegand interface.
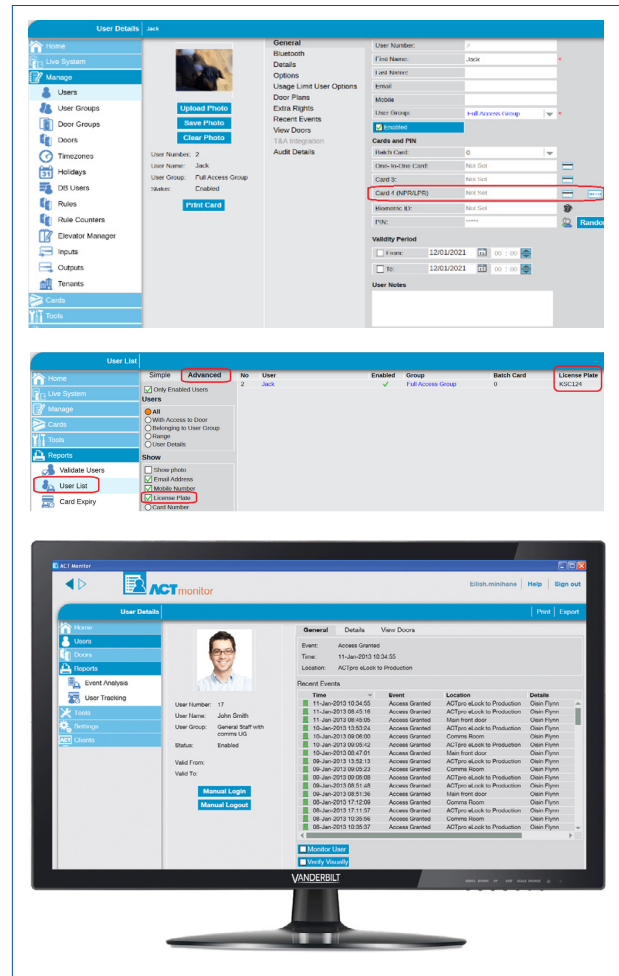

# VANDERBILT

## How it Works

The NPR / LPR camera automatically reads the license plate and converts to a numeric format. The number is then transmitted to the ACTpro controller via the Wiegand or OSPD interface. If the user is configured with appropriate access rights, access in granted.

## Key ANPR Features:

- Allows authorized people to enter and leave the site without the need for a manned station.
- Know when an unauthorized vehicle enters your premises within seconds.
- Have alerts sent when a vehicle from a hotlist passes the detection.
- Monitor personnel coming and going.

## Ideal Sectors:

- Transportation and Logistics.

## Did You Know?

"It's a super example of integration between access control and video. Ideal for warehouses, depots, supermarkets – anywhere where you might need to track the number of deliveries coming and going throughout the day or week. How many of your trucks left that morning, how many came back – that type of detail, tracking, and reporting."

Michael Byrden, Access Control Business Development Manager, Vanderbilt.
