

Integrating with KONE

Vanderbilt's award-winning ACTpro access control

KONE is a global leader in the lift and escalator industry and provides lifts, escalators, automatic building doors, and solutions for maintenance and modernization. This adds value to the life cycle of any building.

The ACTpro and KONE integration allows for a significant increase in footfall through the elevator system. This means you can prioritize elevators and make them work efficiently. For example, during morning rush hour, the elevator can be configured for optimal utilization to ensure effective throughput.

How It Works:

The access control functionality provided by ACTpro can be integrated with KONE lift systems. The integration requires ACTpro 2.15 or later to operate and is subject to license. Here's how it works:

- ✓ A cardholder presents their card to a KONE Destination Operator Panel (DOP), Car Operator Panel (COP), or turnstile with an integrated ACT reader.
- ✓ ACTpro passes MASK information to the KONE group controller.
- ✓ The KONE group controller accepts a request to travel to an allowed floor.

Benefits:

- ✓ Directs passengers to specific elevators that allows access to floor destination
- ✓ Groups people together based on floor
- ✓ Reduces the number of stops
- ✓ Improves efficiency of elevator traffic
- ✓ Energy savings
- ✓ Control of integrated reader in kiosk
- ✓ Manage cardholder access to elevator floors

Did You Know?

"The integration with KONE has many benefits such as efficient transportation of people to their destination, especially during peak times. Rules can be customized to individual needs, for example, a janitor may require a large elevator car. The installation and integration of KONE and ACT is much more straightforward because there is no cabling required as with traditional hardwired elevator control since the ACT software talks directly to the KONE server via the KONE API."

Michael Moyna, Senior Product Manager, Vanderbilt.
