

PRODUCT LINE: Omnis

PRODUCT NAME: Omnis 7.1

MODEL(S): See below

CATEGORY: Sales & Delivery Release

CONTACT: Jimi Mattila

DATE: 2022-05-24

ACRE is pleased to inform you about the sales and delivery release of Omnis 7.1 Hotfix 1. The hotfix can be downloaded from our [Webshop](#) and should only be applied to existing installations of Omnis 7.1.

What's new in Omnis 7.1 Hotfix 1?

Hotfix 1 fixes a potential crash-scenario where the RBServer-service stops due to heavy simultaneous load from Clients and API-connections, where a growing backlog of queued messages eventually can cause the following error: "0xC0000005: Access violation reading location".

Hotfix 1 is applied by changing the existing RBServer.exe file with the RBServer.exe file provided in the Hotfix 1 package. The service needs to be shut down before the change can be made.

A – Order information

Hotfix 1 is available on the [Webshop](#) under the Software-tab in all ACRE Omnis base license software packages. See below for full list.

B – Product description

Base Licenses

Product name	Order number	Product Description
ACRE Omnis 1 User	VGBI:10661	RB-ACC is the software for ACRE Omnis and it is a powerful tool for installation and administration of the system. The software is installed on a standalone PC that is connected
ACRE Omnis Server +1 User	VGBI:10662	

ACRE Omnis Server +4 Users	VGBI:10664	directly to the Omnis hardware, or on a server with a server software. With the software, all settings can be performed, and the hardware is easily installed in the LON network. RB-ACC handles functions such as intrusion alarm, access control, fire detection, assault alarm, operation alarms, lighting control, time distribution, logical functions, graphics and card production.
