- Pricing adjusted for Base Licenses and Extensions

Order Information:

The existing articles previously used to purchase the Base License for Omnis 6.3SP4, or any extensions/upgrades to it, will now instead provide customers with Omnis 7.0-related counterparts. See the tables below for a full list.

Product Description:

Base Licenses:

Product name	Order number	Product Description
Vanderbilt Omnis 1 User	VGBI:10661	RB-ACC is the software for Vanderbilt Omnis. It is a powerful tool for installing and administering the system. The software is installed on a standalone PC that is connected directly to the Omnis hardware or on a server with a server software. With the software, all settings can be performed, and the hardware is easily installed in the LON network. RB-ACC handles functions such as intrusion alarm, access control, fire detection, assault alarm, operation alarms, lighting control, time distribution, logical functions, graphics, and card production.
Vanderbilt Omnis Server +1 User	VGBI:10662	
Vanderbilt Omnis Server +4 Users	VGBI:10664	
Vanderbilt Omnis Server +9 Users	VGBI:10666
