VGBI:51-304	0958-102-P Active Cotag ISO Card programmed	VGBI:51-303	0958-102 Active Cotag ISO Card

A second migration path* can be offered to existing Granta customers as follows:

It is possible to enable a dual DC (Distributor Code) option in the controllers, which will allow customers to keep their existing range of deployed cards and seamlessly add the IB9xx variants moving forward. To enable this feature, a remote assistance fee needs to be charged, but once complete customers can continue to expand their card holder database.

***Note:** This feature is only available for Granta sites and is not supported when migrating the hardware to SiPass integrated.
