DATE: 04-09-2018

E200-IB is now released. This is a simple interface board that can be used when exchanging an E2V node for an E200 node.

In some installations the cables leading to the E2V are cut in such a way that they don't fit the connector layout of the E200, and therefore make a swap troublesome. The E200-IB is particularly useful in such cases. It has the same footprint and connector layout of the E2V, and from the E200-IB new cables can be connected to an E200.
