PRODUCT: Entro 6.7

MODEL(S): V24246-P8601-A1 / VGBI:31-823

CATEGORY: Service Pack Release

CONTACT: Local Technical Support

DATE: 2017-07-20

A new service pack release for Entro 6.7 will be available in stock on July 28th.

Entro 6.7.012 builds on previous service pack releases and includes minor updates on issues relating to reservations, event handling in Windows 10, and door filters on IOR6 relays.

The “Known Limitations” document has been updated to clarify operations around motor lock and security level functionality, using the exit button to hold a door open, using the same reader for alarm and anti-passback zones, and Entro 6.7 integration with Vectis iX.

Additional note: Recordings are triggered by events in Entro and therefore pre-recording time settings in Entro cannot be used. Vectis iX must be used for pre-recorded viewing.

All order numbers and pricing information remains unchanged.
