Stock available once old product depleted

In order to support the new reader, we also released a new software revision (V.1.0.0.14) of our 3CT Configuration Card Creation Tool. The 3CT tool is used to configure the function of the light frame, LED, buzzer, back-light, set the reader address and define card reading profiles for the ARxxS-MF and VRxxS-MF readers. The new software is backwards compatible and will be in stock shortly.
