PRODUCT RELEASE

PRODUCT LINE: INTRUSION

PRODUCT: SPC Connect

MODEL: 2.5 **CATEGORY:** NEW PRODUCT

CONTACT: Local Tech Support **DATE:** 15-02-2018

SPC Connect 2.5 is a service release of SPC Connect. The update will be applied on 20 February 2018. There will be no changes to the Android or IOS applications as part of this release.

Key Features:

Push notification will be enhanced to allow for the monitoring of fault conditions and other service information. This will enable the following filters to be selected:

- Faults
- Fault restores
- System information

The user will be required to activate these filter options for operation to commence. The push notification operation will also be altered for full set and unset. Customers will receive a single push notification when arming or disarming their system.

SPC Connect configuration

As part of this release, connections to SPC Connect that have been configured with a static IP will be highlighted. If you see a highlighted connection, we would recommend, where possible, updating to SPC 3.8.5 and changing from a static IP to the URL www.spcconnect.com.

Sign up process

The sign-up process will be enhanced for installers who wish to create a company on SPC Connect. This will allow for easier handling of the process.
