PRODUCT RELEASE

PRODUCT LINE: INTRUSION

PRODUCT NAME: GSM Module incl. Antenna

MODEL(S): SPCN320.000 **CATEGORY:** REPLACEMENT PRODUCT

CONTACT: Local Technical Support Team **DATE:** 11-09-2017

The SPCN320 3G GSM modem is being formally released. This product is a direct replacement for the SPCN310 modem for which stock is almost depleted in all warehouses.

This product has been tested and approved to EN and VdS intrusion standards, and the final modifications (label updates etc.) are currently being implemented in manufacturing.

The SPCN320 supports common alarm communication protocols (SIA and Contact ID), as well as IP Communication over 2G/3G (FW 3.8 or later). 3G functionality is the ideal complement to SPC push notification and verification features.
