

PRODUCT LINE: INTRUSION

PRODUCT NAME: SPC

MODEL(S): 3.8.5 **CATEGORY:** PRODUCT UPDATE

CONTACT: Local Tech Support **DATE:** 20-11-2017

The SPC central system will be updated to SPC 3.8.5 and a new programming tool will also be released to support this latest version. In the coming months, SPC 3.8.5 will become the baseline version for SPC and will replace SPC 3.6.6 in manufacturing and will be approved for installations in accordance with: EN; VDS; NF; and SDBC.

As part of the release, SPC Pro will be entering maintenance mode and replaced with SPC Connect Pro. This new tool creates a more unified programming experience for installers using the same web interface as the SPC panel. To use the tool, installers will be required to register at www.spcsupportinfo.com. Updates and feature enhancements will occur automatically with the new software tool.

A major enhancement is how support will be offered for SPC. Manuals and documentation will be offered in web-friendly formats and can be accessed from www.spcsupportinfo.com.

SPC 3.8 is a major update for SPC and full details of the enhancements are available within the SPC 3.8.5 data pack. This data pack will be available from the November 23rd from Vanderbilt Support, and from SPIAP on November 24th. It is estimated that SPC 3.8.5 will be in stock Q1 2018.
