

Getting People Back To Work During COVID-19

Visitor Management

INTRODUCTION

The outbreak of the COVID-19 virus has presented a challenge to communities and businesses.

The use of **Electronic Access Control** has become more than a means to prevent criminal activity. It's now appearing as a key tool for businesses in the following ways:

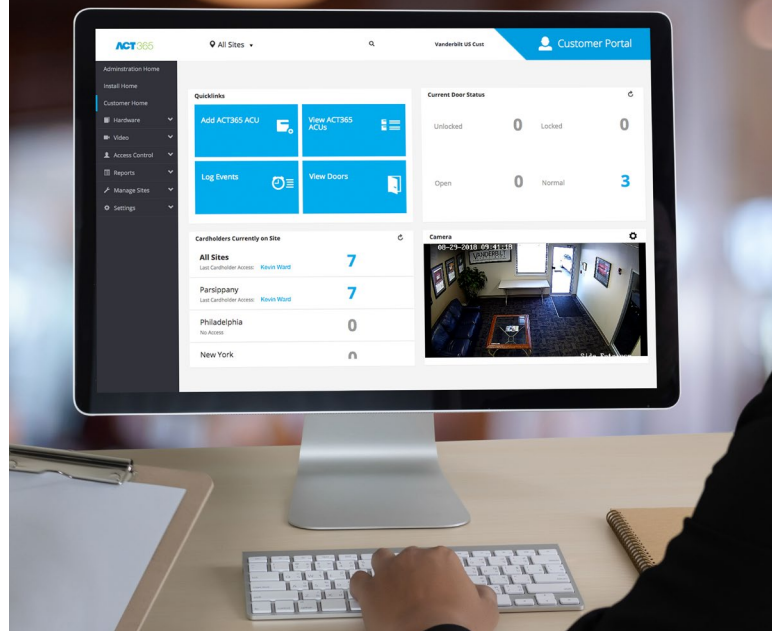

- ✔ To manage and audit occupancy levels to ensure social distancing
- ✔ To enhance customer experience by giving customers appointments and a QR code, allowing hands-free entrance
- ✔ By proving other hands-free devices such as touch-free exit buttons, Bluetooth readers, QR code readers

- ✔ By providing temperature reading facial devices which can also check if people are wearing a mask
- ✔ By providing contact traceability reports where a person had become infected, and you want to trace who may come in contact, or was working in that vicinity
- ✔ Giving alarms on busy locations to assist deployment of cleaning staff in real-time.

As we start actively planning to open our places of work safely, Vanderbilt is providing our customers with smart and reliable strategies to help create a safer environment for staff and visitors.

At Vanderbilt, we have explored best practices for protecting employees and visitors when they come to a building.

By implementing the following security strategies, we believe businesses can help create a safe environment.

COVID-19 has made it crucial for workplaces to limit unnecessary person-to-person contact and potential transmission incidents. Businesses will look at new ways to check-in, track, and collect information to protect visitors and employees.

Visitor management systems allow visitors to be pre-planned by your organization and can include important health and safety information that visitors must comply with in your building.

- ✔ Area counting
- ✔ Pre-booking systems for customers and visitors
- ✔ Minimize contact with access control devices
- ✔ Contact trace reporting
- ✔ Thermal image camera usage with mask detection and palm reading
- ✔ Visitor management systems
- ✔ Remote security management and maintenance
- ✔ Providing alarm when thresholds are met to alert cleaning staff to cleanse an area.
